A VIEW OF THE WEST BASIN AT PORT ARTHUR FROM THE NORTH-EAST CORNER OF NAMAKO HILL.

Time: 22nd September, 1904, 5.00 p.m.

The warships anchored at the harbour entrance and its neighbourhood appear from the slight smoke they emit to be keeping up steam. Close at the top to this warship in this centre stand the Taantzu Hill Forts behind which lies concealed the Tiger's Tail Peninsula, to the left of which tower the Golden (Huangkin) Hill Forts. The highest on the right edge are the Kikwan Forts ranging to the left of which are the Manzuying Forts.

A VIEW OF THE 174 METRE HILL FROM THE NORTH-EAST EDGE OF NAMAKO HILL.

Time: 21st September, 1924, 3.00 p.m. The tents to be seen in two different places and the two storehouses, large and small were erected by the Russians. Although the place was captured by the Japanese toward the close of August, yet up to the date of the picture, it could not on account of the plunging fire from Namako Hill be taken possession of any more than were the mounted guns which may be seen on the top part of the photograph. While this photograph was being taken, a Russian shell fell and exploded about 150 metres in front. The mark below the smoke on the right is a cloud of dust thrown up by the scattering of the fragments of the shell. In the lower part on the left may be observed a section of the shoulder of Namako Hill.

NAMAKO HILL AND THE 203-METRE HILL DURING THE GENERAL ATTACK.

COPYRIGHT.

Time: 20th September, 1904, 5.30 p.m. The entire range in front is that of Namako Hill which was so named by the Japanese Army; and to the right of it the 203-metre Hill is to be seen more faintly. At the time the various companies of the First Infantry Regiment are swimming under rocks ha'f-way up the hill; and the Japanese artillery have almost suspended fire and trained their guns upon the 203-metre Hill.

A RUSSIAN HEAVY GUN MOUNTED ON THE NORTH-EAST CORNER OF NAMAKO HILL.

Photographed two days after the capture. The object lying about two centimetres to the right of the  in the foreground with a hook-shaped cord attached to it is a grenade used by the Russians; the round hole in the shield was made by a Japanese shell; and in addition to the guns which were of 12-centimetre calibre, the Russians fired their small-arms with great effect.

COLLECTION OF MATERIALS FOR THE SIEGE ENGINEERS' HEADQUARTERS AT CHOUCHIATUNG.

Phot. 26th September, 1904, 2.30 a.m. The entire scene was captured from the Russians; the broad black objects near them are known as shields for lying-down men and the long ones as shields which are all used in attacking forts. The bullet-marks on them were made in testing their protective power against small arms fire.

CRATERS OF EXPLOSION OF RUSSIAN SHELLS, IN A HOLLOW WEST OF WANGCHIATIE.

COPYRIGHT

The shells came from the right of the picture and the craters have a major diameter of six metres and a minor diameter of four and a half metres.

As the neighbourhood is a millet field with few great stones about, the diameters were especially great. The shells

are said to have been sent from 35-centimetre guns on Russian men-of-war.

THE PIER AT ALEXANDROVSK.

The pier is 430 metres long and 17 metres wide; and a light house runs through the middle of it and connects the both extremities, 2000 metres away, at the entrance to the town of Alexandria. Near the shore and at the pier are seven buildings, containing 1 hotel, 1 bank, 1 oil and wood warehouses, 1 cinema, 1 inspectors' quarters, and 1 warehouse for food stuffs; and the house for drinking purposes. I brought from a house left by residents which appear in the picture as a white line above the pier, the reflection of the pier. The two towers are marked by stones.

[illegible]

A COLLIERY NEAR DUE

It lies about 2,000 yards north of the village at Trow; consists of two parallel ridges, some 50 yards apart, and though the coal from the mine is of good quality, there is too much sand in it. The spurs of soil brought against the right side of the two ridges is the best sort of soil, and is used for corn. There is good pasture on the soil to the right and left of the ridges, and the road which has been made is 4 ft. 6 in. high in places. In passing over the ridge the right part of the pasture is much higher, and some of the soil may be carried on to the ridge, but it is not at all likely. The ground is covered with coarse grass, and is free from weeds.

A ROAD OVER PILYONSKY HILL.

The thick wood consists mostly of larches, poplars, birches, and hibiscuses; the trees are felled only for a few metres on either side of the road; and in the carts to be seen on the road provisions are being transported by the supplementary military train. That part of the wood which is a little open is a pass (forming the boundary between the districts of Alexandrovsk and Toivsk), and slightly below it may be descried a small portion of the road, the neighbourhood of which cannot be traversed by carts.
